Cover:**Merchant's token: Moosomin, Assiniboia**

The District of Assiniboia was created in the North-West Territories in 1882 and comprised the southern portion of present-day Saskatchewan. The district name was derived from that of the Assiniboin Indians who once inhabited the region. In late 1890 a merchant by the name of Andy Whyte opened a general store in Moosomin (a settlement about 12 miles from the Manitoba border), and in 1893 Whyte and Company issued oval-shaped tokens in denominations of 5, 10, 25, 50 cents and 1 dollar. These tokens were apparently produced in four different metals – aluminum, brass, copper and white metal – although the reason for this practice is unknown. A 2-dollar token was also issued, but the only known examples are in aluminum. The tokens, which were redeemable in merchandise, were a form of credit to Whyte's customers. They circulated until 1910 when Whyte sold his store because his business expectations had not been fully realized. The most interesting feature of Whyte's tokens is that they were one of the few series of tokens that bore the abbreviation for the district name of Assiniboia. On 1 September 1905, part of the District of Athabasca, the District of Saskatchewan and four fifths of Assiniboia were combined to form the Province of Saskatchewan as it exists today. The piece illustrated on this month's cover is made of white metal and is part of the National Currency Collection, Bank of Canada. Photography by James Zagon, Ottawa.

Couverture:**Jeton de marchand: Moosomin, Assiniboia**

Le district d'Assiniboia, qui avait été créé en 1882 aux Territoires du Nord-Ouest, englobait la partie méridionale de l'actuelle province de la Saskatchewan. Le nom du district dérive de celui de la tribu assiniboine, qui habitait autrefois la région. A la fin de 1890, un marchand du nom d'Andy Whyte arriva à Moosomin – établissement situé à environ 12 milles de la frontière du Manitoba – où il ouvrit un magasin général. En 1893, *Whyte and Company* frappa des jetons ovales de 5, 10, 25, 50 cents et un autre de 1 dollar. Il semble, sans que personne ne sache pourquoi, que chacun de ces jetons ait été produit en aluminium, en laiton, en bronze et en métal blanc. Whyte frappa également un jeton de 2 dollars, mais tous les spécimens qui nous sont parvenus sont en aluminium. Convertibles en marchandises, les jetons étaient remis aux clients à qui Whyte accordait du crédit; ils circulèrent jusqu'en 1910, année où Whyte vendit son magasin, ses affaires n'ayant jamais obtenu le succès espéré. Les jetons de Whyte comptent parmi les rares jetons portant l'abréviation du nom du district d'Assiniboia. Le 1^{er} septembre 1905, une partie du district d'Athabasca, le district de la Saskatchewan, et les quatre cinquièmes de celui d'Assiniboia furent réunis pour former la province de la Saskatchewan. L'échantillon reproduit en couverture est en métal blanc et fait partie de la Collection nationale de monnaies, Banque du Canada. Photographie de James Zagon, Ottawa.

The financing of provincial governments and their enterprises

Le financement des provinces et de leurs entreprises

This discussion of the financing of the provincial governments and their enterprises covers the period from 1970 to the beginning of 1980. An earlier article in the Review examined the financing of the provincial sector through the 1950s and 1960s*. The operations discussed in this article include all direct borrowing by the provinces and their enterprises as well as enterprise financing that is guaranteed by the provinces.

The total financing requirements** of the provincial sector rose rapidly in the first half of the 1970s and remained high to the end of the decade reflecting not only the rapid increase in the governments' own expenditures but also the initiation of extensive capital outlays by their enterprises. As a result, net new borrowing quadrupled from \$2.1 billion in fiscal year 1971, that is, the year ending 31 March 1971, to \$8.4 billion in fiscal year 1980 with the largest increases being concentrated in the middle of the decade. While the provinces and their enterprises continued throughout the period to rely on the traditional domestic market and 'non-market' sources of funds, they also made extensive use of U.S. and other foreign markets including the Euro-market and the national markets of Germany, Switzerland and Japan.

*'The financing of provincial and municipal governments and their enterprises', Bank of Canada Review, October 1972.

**Total financing requirements reflect the deficit (or surplus) position on a national accounts basis plus the net cost of other transactions such as loans, investments and advances by these governments, and requirements of provincial government enterprises essentially to finance capital expenditures. The national accounts deficit (or surplus) position provides a rough measure of the budgetary requirements of the provincial governments, although on an accrued rather than cash basis.

This article was prepared in the Securities Department.

Cette analyse du financement des provinces et de leurs entreprises porte sur la période comprise entre 1970 et le début de 1980. Le financement du secteur des provinces durant les années cinquante et soixante a déjà fait l'objet d'un article publié dans cette Revue*. Le présent article étudie les emprunts contractés par les provinces et ceux qu'ont obtenus les entreprises des provinces avec ou sans la garantie de ces dernières.

L'ensemble des besoins de financement** du secteur des provinces s'est accru rapidement au cours de la première moitié des années soixante-dix et est resté élevé jusqu'à la fin de la décennie, ce qui non seulement reflète l'accroissement rapide des dépenses des gouvernements eux-mêmes, mais marque aussi le début d'une période d'investissements accélérés pour les entreprises provinciales. Ainsi, le chiffre net des emprunts a quadruplé, passant de 2,1 milliards de dollars pour l'exercice financier 1971, soit l'exercice qui s'est terminé le 31 mars 1971, à 8,4 milliards de dollars pour l'exercice 1980, le gros de l'accroissement s'étant produit au milieu de la décennie. Pendant la période étudiée, les provinces et leurs entreprises ont continué à faire appel au marché intérieur traditionnel et à d'autres sources de financement, mais elles ont aussi largement bénéficié des concours financiers du marché américain et d'autres marchés étrangers, dont celui des eurodevises et les marchés nationaux de l'Allemagne, de la Suisse et du Japon.

*«Le financement des provinces, des municipalités et de leurs entreprises», Revue de la Banque du Canada, octobre 1972.

**L'ensemble des besoins de financement comprend le déficit (ou l'excédent) en termes de comptabilité nationale, plus le coût net d'autres opérations telles que les emprunts, les investissements et les avances de ces gouvernements ainsi que les concours dont les entreprises provinciales ont surtout besoin pour financer leurs immobilisations. Le déficit (ou l'excédent) en termes de comptabilité nationale donne une idée approximative de la situation budgétaire des provinces en termes de comptabilité d'exercice plutôt qu'en termes de comptabilité de caisse.

Le présent article a été rédigé au département des Valeurs.

The growth in financing requirements

Expenditures by provincial governments for goods and services, provincial transfer payments and the capital investment requirements of their enterprises expanded markedly during the 1970s. While the rate of expansion accelerated over the first half of the decade, it moderated noticeably after 1975.

On a national accounts basis, expenditures of the provincial governments themselves rose at an average annual rate of 18.2 per cent for the period 1970-75. In the period between 1976 and 1979 this rate slowed to 12.1 per cent, in part as a result of spending restraints by the provinces. When measured as a proportion of Gross National Expenditure (GNE), provincial government expenditures rose from 14.6 per cent in 1969 to about 19 per cent in 1975 and since then have fluctuated narrowly around that level.

At the same time capital expenditures by provincially owned business enterprises also grew considerably faster than total spending in the economy. Annual gross fixed capital formation by non-financial provincial enterprises rose from \$1.5 billion in 1970 to almost \$5 billion in 1975, more than tripling in five years. This leap in spending reflected the launching of such major projects as Hydro Quebec's James Bay development and several new electric power plants by Ontario Hydro. The rapid rate of growth, however, was not maintained after 1975; capital outlays rose further to \$7 billion in 1979, an average annual growth rate of about 10 per cent. This deceleration in the rate of growth of investment resulted from a downward adjustment of the expected growth rate of electricity demand in a number of provinces, given anticipations of slower economic expansion, moderating population growth and higher electricity costs.

Growth of provincial government revenues on a national accounts basis was strong throughout the decade, averaging more than 15 per cent a year and rising from 15 per cent of GNE in 1969 to 19.5 per cent in 1979. The substantial expansion of revenues reflected three main factors. First, throughout the 1970s growth in direct personal tax receipts of provincial governments exceeded that of GNE. Moreover, cash transfers from the federal Government for equalization and shared-cost programs also contributed significantly to provincial revenue growth. Finally, higher natural resource revenues stemming from increases in oil and gas prices and royalty rates, while not evenly

L'accroissement des besoins de financement

Les dépenses de financement des provinces au titre des biens et services et des paiements de transfert de même que les besoins des entreprises provinciales dans le domaine des investissements se sont accrus de façon marquée au cours des années soixante-dix. Le rythme d'expansion s'est accéléré pendant la première moitié de la décennie, mais il s'est sensiblement ralenti après 1975.

Les comptes nationaux indiquent que les dépenses des provinces ont augmenté durant la période comprise entre 1970 et 1975 à un taux annuel moyen de 18,2%. Entre 1976 et 1979, ce taux est tombé à 12,1% par suite notamment des mesures restrictives adoptées par les provinces. La proportion de la dépense nationale brute (DNB) constituée par les dépenses des provinces est passée de 14,6% en 1969 à environ 19% en 1975 et s'est maintenue depuis aux alentours de ce chiffre.

Parallèlement, les dépenses d'investissement des entreprises provinciales se sont, elles aussi, accrues beaucoup plus vite que la dépense globale. En chiffres annuels, la formation brute de capital fixe des entreprises provinciales du secteur non financier a plus que triplé en cinq ans, passant de 1,5 milliard de dollars en 1970 à près de 5 milliards de dollars en 1975. Cet accroissement remarquable de la dépense s'explique par le lancement de grands travaux d'infrastructure comme la construction du complexe hydro-électrique de la Baie James par l'Hydro-Québec et celle de plusieurs centrales électriques par l'Hydro-Ontario. Toutefois, le rythme de croissance rapide des dépenses ne s'est pas maintenu après 1975; en 1979, les dépenses d'investissement ne se sont accrues que d'environ 10%, passant ainsi à 7 milliards de dollars. Cette décélération a résulté d'un ajustement à la baisse du taux de croissance prévu de la demande d'électricité dans un certain nombre de provinces étant donné qu'on s'attendait à un ralentissement de l'expansion économique, à une baisse de la croissance démographique et à un renchérissement de l'électricité.

Les statistiques de la comptabilité nationale montrent que la croissance des recettes des provinces a été élevée durant toute la décennie, s'établissant à un taux moyen de plus de 15% par année; en proportion de la DNB, elle est passée, de 1969 à 1979, de 15 à 19,5%. Cette augmentation considérable des recettes peut s'expliquer par trois grands facteurs. Premièrement, dans les années soixante-dix, l'accroissement des recettes fiscales constituées par les impôts directs que les particuliers ont payés au provincial a été supérieur à celui de la DNB. De plus, les transferts effectués par le gouvernement fédéral dans le cadre des accords de péréquation et des programmes à frais partagés ont contribué de façon significative à l'augmentation des recettes des provinces. Enfin, le relèvement des prix du pétrole et du gaz et la majoration des redevances 'quoique réparties inégalement entre les provinces' ont fait augmenter les recettes provenant de l'exploitation des richesses naturelles et du même coup fait passer

distributed among provinces, caused investment income to rise from 7 per cent of total provincial revenue in 1969 to 14 per cent in 1979.

On a national accounts basis, the fiscal position of all provincial governments combined has shown a marked improvement in the second half of the 1970s and, indeed, has been in surplus in the last two years. This, however, has masked a widening divergence between the surplus position of the three westernmost provinces and the combined deficit of the remaining provincial governments. As a result, therefore, the borrowing requirements in total have not declined as might have been expected from the total fiscal balance. Furthermore, although the financing needs of their enterprises have not been growing as rapidly as in the early 1970s, they have remained high. Consequently the amount of borrowing by the provincial sector as a whole has been sustained at around \$8-9 billion each year since fiscal year 1975.

Sources of financing

When discussing the sources of financing used by the provinces and their enterprises in their net debt financing, it is useful to distinguish between 'non-market' sources, that is, borrowings arranged with special provincial accounts or agencies, and market sources, both domestic and foreign.

'Non-market' borrowing

The 'non-market' sources of funds for the sector are mainly the Canada Pension Plan (CPP), direct placements of securities with provincial government accounts and, to a lesser extent, loans from the federal Government. These borrowings may take several forms such as the issue of special non-marketable bonds, a direct participation in marketable issues by provincial accounts, or direct loans from the federal Government or from another province. As can be seen in the table, the first two of these sources have grown steadily over the period while loans from the federal Government have been declining from a peak in fiscal year 1977.

The CPP remains the single most important non-market source of financing for the provinces. This fund, which operates in all provinces except Quebec, invests most of the surplus of contributions over benefits paid in loans to the participating provinces. These loans, prorated among provinces according to the provincial contribution to the

la proportion des revenus des investissements par rapport à l'ensemble des recettes des provinces de 7 à 14% entre 1969 et 1979.

En termes de comptabilité nationale, la situation financière de l'ensemble des provinces s'est sensiblement améliorée au cours de la seconde moitié des années soixante-dix et elle s'est même soldée par un excédent pendant les deux dernières années. Cet excédent dissimule toutefois l'écart de plus en plus grand entre l'excédent des trois provinces les plus à l'ouest du pays et le déficit de l'ensemble des autres provinces. C'est pourquoi les besoins de financement à l'échelle nationale n'ont pas diminué, contrairement à ce qu'aurait pu laisser prévoir la situation financière de l'ensemble des provinces. En outre, bien que les besoins de financement des entreprises provinciales n'augmentent pas depuis quelque temps aussi rapidement qu'au début des années soixante-dix, ils n'en demeurent pas moins considérables. Tout cela explique que le montant des emprunts contractés par le secteur des provinces soit resté depuis l'exercice financier 1975 de l'ordre de 8 à 9 milliards de dollars par année.

Les sources de financement

Lorsqu'on examine les sources de financement auxquelles les provinces et leurs entreprises ont recours pour se procurer les capitaux frais dont elles ont besoin, il est utile de faire la distinction entre les emprunts hors marché – ceux qu'elles obtiennent des agences ou de comptes spéciaux des provinces – et les emprunts contractés sur les marchés, publics intérieur et étrangers.

Les emprunts hors marché

Les principales sources de financement hors marché auxquelles ont recours les provinces et leurs entreprises pour se procurer le montant net de capitaux dont elles ont besoin sont le Régime de pensions du Canada (RPC), les comptes des gouvernements provinciaux qui achètent directement des titres et, dans une moindre mesure, le gouvernement fédéral. Ces concours peuvent être obtenus notamment par l'émission d'obligations spéciales non négociables, par la participation directe des comptes provinciaux aux émissions négociables ou sous forme d'emprunts au gouvernement fédéral ou à une autre province. Comme le montre le tableau, l'importance des deux premières sources de financement a augmenté de façon constante au cours de la période, tandis que les emprunts contractés auprès du gouvernement fédéral diminuent depuis 1977, année où ils avaient atteint un niveau record.

Le Régime de pensions du Canada demeure la plus importante source de financement hors marché des provinces. Ce régime, qui existe dans toutes les provinces à l'exception du Québec, effectue des placements en prêtant aux provinces participantes la plus grande partie de l'excédent des cotisations sur les prestations. Ces prêts,

fund, take the form of purchases of special non-marketable securities issued by the provinces, with terms of up to 20 years and bearing interest rates based on the yields of Government of Canada marketable bonds of comparable maturity. At 31 March 1980 such CPP loans to provinces totalled \$16 billion.

Direct placements are made in the form of bonds, which are sold by a particular province directly to its own government accounts including 'heritage funds' and trustee civil service and teachers' pension funds. On an absolute basis, direct placements with provincial accounts increased by 46 per cent and 56 per cent respectively in the fiscal years 1975 and 1976, and by the end of the decade were providing over \$2 billion a year to meet provincial financing requirements. This development reflected in part the larger investible surplus in various pension fund accounts which benefited from a rise in contributions and interest income well above recent pension benefit payments. It reflected also the establishment of heritage funds in both Alberta and Saskatchewan in the latter half of the 1970s which channelled a portion of revenues from non-renewable natural resources into investments to provide present and future economic and social benefits to residents. These two provinces, along with British Columbia which is a major gas producer, have been able to use the sizeable and increasing flows of revenues from natural resources to finance their own rising expenditures, the capital outlays of their enterprises and the acquisition of financial assets.

The growth of the Alberta and Saskatchewan heritage funds has been very rapid since their beginning; as at 31 March 1980 they held assets of \$6.4 billion and \$0.75 billion respectively. While Saskatchewan's heritage fund has all been invested within the province principally in Crown corporations involved in resource development, the Alberta heritage fund has been active not only in direct placements in Alberta but also in loans to other provinces* and in market purchases of Government of Canada, provincial and corporate securities. Indeed the Alberta fund has become a major source of financing for other provinces. In fiscal year 1980 the fund purchased \$0.7 billion, or 20

octroyés aux provinces au prorata des cotisations, prennent la forme d'achats de titres spéciaux non négociables émis par les provinces; l'échéance de ces titres peut aller jusqu'à 20 ans, et leur taux d'intérêt est calculé à partir du taux de rendement des obligations négociables du gouvernement canadien d'échéance comparable. Au 31 mars 1980, le montant des prêts du Régime de pensions aux provinces s'élevait à 16 milliards de dollars.

Quant aux placements directs, ils se font sous la forme de ventes d'obligations d'une province donnée à des comptes ou fonds de cette même province, y compris les fonds du patrimoine et les caisses de retraite des fonctionnaires et enseignants gérées par des fiduciaires. Les ventes directes aux comptes provinciaux ont augmenté de 46 et de 56% respectivement durant les exercices 1975 et 1976 et, à la fin de la décennie, elles fournissaient plus de 2 milliards de dollars par année aux provinces. L'augmentation de ces placements a été facilitée par l'accroissement des capitaux excédentaires de diverses caisses de retraite qui ont vu le total des cotisations et des intérêts perçus progresser ces derniers temps à un rythme nettement supérieur à celui des prestations servies. Une autre cause de cette augmentation a été la constitution, au cours de la seconde partie de la décennie, d'un fonds du patrimoine en Alberta et en Saskatchewan; ces fonds permettent d'acheminer une partie des recettes provenant de l'exploitation des richesses naturelles non renouvelables vers des placements devant apporter, dans l'immédiat et à l'avenir, certains avantages économiques et sociaux aux résidents. Ces deux provinces ainsi que la Colombie-Britannique, qui est un gros producteur de gaz naturel, ont été en mesure d'utiliser les flux considérables et de plus en plus importants de revenus que leur assurent leurs richesses naturelles pour financer leurs dépenses croissantes, les dépenses d'investissement de leurs entreprises et leurs achats d'avoirs financiers.

Depuis leur création, les fonds du patrimoine de l'Alberta et de la Saskatchewan ont connu une croissance très rapide; au 31 mars 1980, leurs actifs s'élevaient respectivement à 6,4 et 0,75 milliards de dollars. Tandis que toutes les ressources financières du fonds de la Saskatchewan ont été placées dans la province, principalement dans les sociétés de la Couronne qui se consacrent à l'exploitation des ressources, le fonds de l'Alberta a non seulement participé à des placements directs en Alberta, mais il a aussi octroyé des prêts à d'autres provinces* et acheté sur le marché des titres du gouvernement canadien, d'autres provinces et de sociétés. De fait, le fonds de l'Alberta constitue désormais une source importante de financement pour les

*These loans are negotiated directly with another provincial government or enterprise and are secured by an issue of marketable bonds; hence in the table, they are included in the figures on domestic marketable bonds.

*Ces prêts sont négociés directement avec le gouvernement ou une entreprise d'une autre province et sont garantis par une émission de titres négociables; les données qui s'y rapportent figurent au tableau avec les chiffres des obligations négociables.

per cent, of the \$3.5 billion gross provincial marketable bonds issued on the Canadian public market.

Although the Caisse de Dépôt et Placement du Québec invests only in marketable securities, it too can be considered a 'non-market' source as most of its funding comes from the Quebec Pension Plan and several other government of Quebec accounts, and its funds are invested mainly in bonds of the province and its enterprises. The Caisse, in addition, holds a substantial portfolio of other debt and equity investments. In calendar year 1979 alone, the Caisse acquired \$1.1 billion in new bonds issued or guaranteed by the province of Quebec. At 31 March 1980 the Caisse held assets in excess of \$10 billion.

Market borrowing

To the extent that provinces and their enterprises could not finance their cash requirements totally from the 'non-market' sources outlined above, they had to rely on domestic and foreign public markets. Since much of provincial requirements during the 1970s reflected spending on major long-term capital projects initiated by provincial enterprises, the sector continued to rely heavily on the long-term bond market. Issuance of short-term paper was minimal throughout the entire period, although financing with treasury bills was significant in fiscal year 1976. This surge in the issuance of treasury bills, which accounted for just under \$400 million of net financing for the fiscal year, appears to have been related to a number of factors including the postponement of longer term financing in anticipation of a decline in interest rates and the apparent inability of traditional sources to meet the rapid increase that year in provincial cash requirements.

Over the ten-year period the provincial sector borrowed in both domestic and foreign markets on a regular basis, but in general relied more heavily on the domestic market in the early and late 1970s and more on foreign markets in the middle years of the decade, especially in fiscal year 1976. Even so, the absolute amount of domestic market financing rose fairly steadily throughout the decade. The ultimate choice between domestic and foreign markets depended to a very large extent on cost considerations, although other factors were also taken into consideration, most notably the ability to place large issues for terms of up to 30 years (in the United States) and the need for foreign currency to finance machinery and equipment purchased abroad or to

autres provinces. Au cours de l'exercice 1980, le fonds a acheté 0,7 milliard de dollars d'obligations négociables des provinces, soit 20% du montant brut de 3,5 milliards de titres de cette nature lancés sur le marché public canadien.

Même si la Caisse de dépôt et placement du Québec n'achète que des titres négociables, elle peut être considérée comme une source de financement hors marché parce que la majeure partie de ses ressources provient du Régime de rentes du Québec et de plusieurs autres comptes du gouvernement du Québec et qu'elle place ses fonds principalement en obligations du Québec et des entreprises de la province. En outre, la Caisse de dépôt et placement détient un important portefeuille de créances et d'actions. Au cours de la seule année civile 1979, la Caisse a acheté 1,1 milliard d'obligations émises ou garanties par la province de Québec. Au 31 mars 1980, les avoirs de la Caisse se chiffraient à plus de 10 milliards de dollars.

Les emprunts sur le marché

Dans la mesure où les provinces et leurs entreprises ne pouvaient pas satisfaire leurs besoins de trésorerie en recourant aux sources de financement hors marché mentionnées précédemment, elles ont dû se tourner vers les marchés publics intérieur et étrangers. Étant donné qu'une bonne partie des besoins des provinces au cours des années soixante-dix était liée à la réalisation de grands travaux d'infrastructure par les entreprises provinciales, les provinces ont dû continuer d'emprunter largement sur le marché des obligations à long terme. Les émissions de papier à court terme ont été peu importantes tout au long de la période, encore que le montant des bons du Trésor émis au cours de l'exercice financier 1976 ait été considérable. Cette augmentation des émissions de bons du Trésor, qui a apporté un peu moins de 400 millions de dollars de capitaux frais durant l'exercice 1976, serait imputable à un certain nombre de facteurs, dont l'ajournement de projets de financement à long terme dans l'attente d'une baisse des taux d'intérêt et l'impossibilité apparente de faire face, cette année-là, à l'augmentation rapide des besoins de trésorerie avec le seul concours des sources de financement traditionnelles.

Au cours de cette période de 10 ans, le secteur des provinces a emprunté régulièrement sur les marchés intérieur et étrangers, mais il a en général eu davantage recours au marché intérieur au début et à la fin des années soixante-dix et surtout aux marchés étrangers au milieu de la décennie, notamment durant l'exercice 1976. Cependant, le financement global obtenu sur le marché intérieur s'est accru en chiffres absolus à un rythme assez régulier tout au long de la décennie. Le choix entre les marchés intérieur et étrangers reposait pour une bonne part sur des considérations de coût, même si d'autres facteurs entraient en ligne de compte, notamment la possibilité de placer de grosses émissions dont l'échéance pouvait aller jusqu'à 30 ans (aux

meet other foreign currency obligations. As a result, the sector tended to rely increasingly on foreign markets when its financing needs rose rapidly or when borrowing of the enterprises represented an increasing share of the sector's total financing.

The provinces and their enterprises made greater use of the domestic market in the early 1970s than was the practice in the 1960s. The tendency towards the domestic market reflected not only the increasing borrowing costs in foreign markets but also the efforts of the federal Government. The Minister of Finance's request in October 1970 that Canadian borrowers explore the domestic market carefully before offering issues for sale abroad was made mainly to mitigate upward pressure on the Canadian dollar which had been allowed to float earlier that year*. As evidence of its commitment to this policy, the federal Government continued to refrain from using the long-term market in its own debt financing. In consequence the sector's net new issues of domestic marketable bonds doubled in 1971-72 to \$1.0 billion which represented one third of its total net financing. From fiscal year 1973 to fiscal year 1975, however, foreign bond issues, net of redemptions, once again became important, as a widening of the differential between Canadian and U.S. interest rates provided a cost advantage for foreign issues.

In the mid-1970s a marked change in the relative importance of major sources of funds occurred. As shown in the chart, the spread between U.S. and Canadian long-term bond yields widened sharply in mid-1975 from about 0.6 percentage points to 1.9 percentage points in the first quarter of 1976. Encouraged by the favourable interest rate costs in the United States the provinces and their enterprises accelerated their foreign borrowing programs, placing a record \$1.6 billion of U.S. dollar denominated bonds in the first quarter of 1976 alone, including some record-sized private placements for Quebec, Ontario and B.C. utilities. For fiscal year 1976 as a whole, net foreign borrowings jumped to \$4.0 billion from the \$1.4 billion level the year before. This represented 44 per cent of total net provincial borrowing in that year, up from 30 per cent the previous year.

Although the sector relied heavily on the U.S. market during this period, the magnitude of provincial borrowing needs necessitated a diversification into other markets as well. At this time a number of

Etats-Unis) et la nécessité de disposer de devises étrangères pour financer les achats d'outillage et d'équipement à l'étranger ou pour honorer d'autres engagements en devises étrangères. C'est ainsi que ce secteur a eu tendance à s'adresser davantage aux marchés étrangers lorsque ses besoins de financement s'élevaient rapidement et qu'augmentait la proportion des emprunts des entreprises par rapport au financement global obtenu par le secteur.

Les provinces et leurs entreprises ont eu davantage recours au marché intérieur au début des années soixante-dix que pendant les années soixante. Cette préférence pour le marché intérieur s'explique par l'accroissement des coûts du crédit sur les marchés étrangers et par les efforts déployés par le gouvernement fédéral. En octobre 1970, le ministre des Finances avait demandé aux emprunteurs canadiens d'étudier avec soin les possibilités du marché national avant de lancer des emprunts à l'étranger; cette demande visait principalement à atténuer les pressions à la hausse qui s'exerçaient sur le dollar canadien, dont le taux avait commencé à flouter quelques mois auparavant*. Pour faciliter la tâche aux emprunteurs, le gouvernement fédéral continua de ne pas emprunter sur le marché à long terme. Ainsi, les émissions nettes d'obligations négociables libellées en dollars canadiens du secteur des provinces ont doublé en 1971-1972 pour s'établir à un milliard de dollars, chiffre correspondant au tiers du financement net obtenu par ce secteur. De l'exercice financier 1973 à l'exercice financier 1975 toutefois, le volume des émissions d'obligations en monnaies étrangères, déduction faite des remboursements, a repris son importance à la faveur d'un élargissement de l'écart entre les taux d'intérêt canadiens et américains.

Vers le milieu des années soixante-dix, l'importance relative des principales sources de financement s'est sensiblement modifiée. Comme l'indique le graphique, l'écart entre les taux de rendement des obligations à long terme au Canada et aux États-Unis s'est creusé considérablement au milieu de l'année 1975, passant de 0,6 à 1,9 point de pourcentage au premier trimestre de 1976. Encouragées par le coût moins élevé du crédit aux États-Unis, les provinces et leurs entreprises ont intensifié leur programme de financement à l'étranger en empruntant au premier semestre de 1976 seulement un montant record de 1,6 milliard de dollars E.-U. dans lequel entraient quelques émissions d'une ampleur sans précédent placées par des entreprises de services d'utilité publique du Québec, de l'Ontario et de la Colombie-Britannique. Sur l'ensemble de l'exercice 1976, le montant net des emprunts en monnaies étrangères, qui n'était que de 1,4 milliard en 1976, est passé à 4 milliards. Ce chiffre représentait 44% du montant net de l'ensemble des emprunts des provinces, comparativement à 30% l'année précédente.

Bien que le secteur ait eu largement recours au marché américain durant cette période,

*This request was withdrawn in February 1975.

*Cette demande a été retirée en février 1975.

foreign markets in Europe and Japan were becoming increasingly active and offering attractive interest costs on foreign currency denominated borrowings. Thus they began to attract a larger volume of new provincial issues. A further element in the recourse of the provincial sector to new markets was the temporary uneasiness of U.S. investors with Canadian bond issues following the Quebec election of November 1976. Such non-U.S. foreign borrowing was primarily done by the electric power utilities of those provinces that lacked major oil and gas resources, and involved Euro-Canadian dollar, Euro-U.S. dollar, Swiss franc, Deutsche mark and Japanese yen financings, generally with terms

l'ampleur des besoins de financement a également obligé les provinces à faire appel à d'autres marchés. A ce moment-là, le marché japonais et un certain nombre de marchés européens commençaient à intensifier leurs activités et à consentir des prêts en devises à des taux d'intérêt avantageux. C'est ainsi qu'ils ont commencé à attirer un volume plus important d'emprunts obligataires des provinces. Par ailleurs, le malaise qu'ont éprouvé temporairement les investisseurs américains face aux émissions d'obligations canadiennes à la suite des élections tenues au Québec en novembre 1976 contribue aussi à expliquer le recours du secteur des provinces à de nouveaux marchés. Ce sont principalement les sociétés productrices d'énergie hydro-électrique des provinces où les ressources en pétrole et en gaz naturel sont limitées qui ont eu recours à ces

to maturity of 10 years or less. There were also small isolated issues in European Units of Account and French francs.

As mentioned earlier, from fiscal year 1978 onwards there was a substantial improvement in the over-all budgetary position of provincial governments, especially the three westernmost provinces. In these recent years the borrowing provinces and their enterprises were generally able to raise increasingly large amounts of funds through the issuance of domestic marketable bonds. Not all were placed on the market however; a substantial amount was placed directly with the Alberta heritage fund and the Caisse. In fiscal year 1980, for instance, these two funds absorbed about half of the gross provincial direct and guaranteed debt issues denominated in Canadian dollars. As can be seen in the table, the share of domestic marketable bonds has on balance increased since fiscal year 1975 and by the end of the decade was more than one third of total net provincial financing. In turn, foreign currency denominated bonds have dropped from a share of 44 per cent to 10 per cent of the total net financing. However, foreign borrowing remained an integral part of the financing programs of the larger borrowers because of the very large absolute size of their requirements. Furthermore, such borrowers were concerned about maintaining a presence in foreign markets in order to keep them accessible on the best possible terms and conditions.

In this period after fiscal year 1978, the composition of the foreign financing began to change. In contrast to the heavy reliance on non-U.S. dollar sources of funds in the middle years of the decade, the majority of foreign issues in recent years has been denominated in U.S. dollars and placed in the U.S. market. The decision to tap different foreign markets had been based on cost considerations prevailing at the time of issue, but several of the currencies involved had subsequently appreciated much more than had been anticipated, thereby eliminating and even reversing the cost advantages. In addition, these markets had at times proved to lack the necessary depth and from time to time had become less receptive in response to currency and interest rate volatility. In brief, the experience in foreign markets had not been entirely favourable to those provinces that had diversified into non-U.S. foreign borrowing, and thus they tended to turn again to the U.S. capital market.

Another development worth noting was the heavy use by the sector of U.S. dollar syndicated loans with international banks during the late

nouveaux marchés et lancé des émissions libellées en eurodollars canadiens, en eurodollars américains, en francs suisses, en marks allemands et en yen japonais; en règle générale, l'échéance de ces titres était de 10 ans ou moins. Les provinces ont lancé également quelques petites émissions en unités de compte européennes et en francs français.

Comme il a été mentionné plus haut, la situation financière de l'ensemble des provinces, en particulier des trois provinces les plus à l'ouest, s'est considérablement améliorée à partir de l'exercice 1978. Ces dernières années, les provinces et leurs entreprises ont pu se procurer en général un financement de plus en plus important en plaçant sur le marché intérieur des obligations négociables. Toutefois, ces obligations n'ont pas toutes été lancées sur le marché; une part substantielle a été placée directement auprès du fonds du patrimoine de l'Alberta et de la Caisse de dépôt. Au cours de l'exercice 1980, par exemple, ces deux organismes ont absorbé près de la moitié du volume brut d'obligations en dollars canadiens émises ou garanties par les provinces. Comme le montre le tableau, la proportion des obligations négociables placées sur le marché intérieur s'est accrue, tout compte fait, depuis l'exercice 1975 et, à la fin de la décennie, elle représentait plus du tiers du montant net des concours obtenus par l'ensemble des provinces. Par contre, la part du financement total constituée d'émissions obligataires en monnaies étrangères est tombée de 44 à 10%. Les plus gros emprunteurs ont toutefois continué d'inclure dans leurs programmes de financement des capitaux provenant de l'étranger en raison de l'ampleur considérable de leurs besoins. De plus, ces emprunteurs tenaient à maintenir une certaine présence sur les marchés étrangers pour continuer d'y avoir accès aux meilleures conditions possibles.

Durant la période qui a suivi l'exercice 1978, les provinces ont commencé à diversifier leurs sources de financement à l'étranger. Contrairement à ce qui s'était produit vers le milieu de la décennie, où les emprunts à l'étranger étaient libellés dans une large mesure en monnaies autres que le dollar américain, la plupart des emprunts obligataires lancés à l'étranger ces dernières années ont été libellés en dollars E.-U. et placés sur le marché américain. La décision d'emprunter sur divers marchés étrangers avait été fondée à ce moment-là sur des considérations de coût, mais un grand nombre de devises concernées se sont par la suite appréciées beaucoup plus que prévu, ce qui a fait disparaître les avantages évoqués et même inversé la situation. De plus, il s'est avéré à l'occasion que ces marchés n'avaient pas la capacité d'absorption nécessaire et se sont montrés de temps à autre moins réceptifs à cause de la volatilité des cours des monnaies et des taux d'intérêt. Bref, l'expérience des provinces qui ont cherché à diversifier leurs sources de financement en s'adressant à des marchés étrangers autres que le marché américain n'a pas été entièrement satisfaisante, et c'est ce qui explique qu'elles aient eu tendance à se tourner de nouveau vers le marché américain.

1970s. The floating rate aspect of these borrowings permitted provinces and their enterprises to raise funds at a time when lenders were moving away from long-term commitments because of uncertainty over the future course of interest rates. The amounts borrowed through such syndicated loans tended to be generally larger than could have been raised through an issue of marketable bonds; the loans usually carried terms of 7-10 years and the interest costs floated on the basis of Euro-dollar deposit rates.

Il convient aussi de souligner que, durant les dernières années de la décennie, le secteur a fait un usage intensif des crédits consortiaux. Le taux flottant dont est assorti ce type d'emprunt permettait aux provinces et à leurs entreprises de se procurer les capitaux dont elles avaient besoin à une époque où les institutions prêteuses évitaient d'octroyer du crédit à long terme en raison de l'incertitude qui entourait l'évolution des taux d'intérêt. Les montants empruntés de cette façon étaient en général beaucoup plus élevés que ceux qu'il aurait été possible d'obtenir au moyen d'emprunts obligataires; l'échéance des emprunts consortiaux était habituellement de 7 à 10 ans, et l'intérêt fluctuait en fonction des taux servis sur les dépôts en eurodollars.

A statement by Gerald K. Bouey Governor of the Bank of Canada

Exposé prononcé par M. Gerald K. Bouey Gouverneur de la Banque du Canada

*at a meeting of the Federal and
Provincial Ministers of Finance
Ottawa, 17 December 1980*

I welcome the opportunity to be present at this Federal-Provincial meeting of Ministers of Finance and to respond to any questions you would like to raise about the monetary policy that is being followed in Canada. Before doing so I thought a brief introductory statement might be helpful.

My statement falls into two parts. The first part addresses the immediate problems posed for Canadian monetary policy over recent weeks, as a result of the very steep run-up of short-term interest rates in the United States and the associated downward pressure on the Canadian dollar. The second part deals more broadly and in longer term perspective with the basic policy being pursued by the Bank of Canada.

Over the past two months short-term interest rates in the United States have shot up. The prime lending rate of U.S. banks, which was 13½ per cent on 16 October, rose in rapid steps to 17 per cent on 21 November and to 21 per cent yesterday. Money market rates in that country are approximately double the level of last July.

The recent upsurge of short-term interest rates in the United States to extremely high levels is part of a pattern of extraordinary interest rate volatility in that country during 1980. No doubt you will recall that U.S. rates shot up to much the same extremely high levels last spring, and then plunged with equal rapidity to extremely low levels early in the summer. I welcome the determination of the U.S. authorities to fight inflation but such wide interest rate gyrations in the United States, whether to extremely high or to extremely low levels, pose very difficult choices for monetary policy in Canada.

In the present case, the rapid run-up of U.S. short-term rates to such

*à la Conférence fédérale-provinciale
des ministres des Finances tenue à
Ottawa le 17 décembre 1980*

Je suis heureux d'avoir l'occasion de participer à cette Conférence fédérale-provinciale des ministres des Finances et je me ferai un plaisir de répondre à vos questions sur la politique monétaire canadienne. Je pense qu'il ne serait pas sans intérêt de faire quelques observations d'ordre général sur le sujet avant de passer aux questions proprement dites.

Mon exposé se composera de deux parties. La première sera consacrée aux problèmes pressants auxquels la politique monétaire canadienne a été confrontée au cours des dernières semaines, par suite de la montée en flèche des taux d'intérêt à court terme aux Etats-Unis et des pressions à la baisse sur le dollar canadien qui en ont découlé. Dans la seconde partie, j'examinerai dans une perspective à plus long terme les grandes lignes de la politique que mène la Banque du Canada.

Au cours des deux derniers mois, les taux d'intérêt à court terme aux Etats-Unis se sont emballés. Le taux de base des prêts bancaires, qui était de 13½% dans ce pays le 16 octobre dernier, a grimpé rapidement pour s'établir à 17% le 21 novembre et à 21% hier. A l'heure actuelle, les taux du marché monétaire américain sont environ deux fois plus élevés qu'ils ne l'étaient en juillet dernier.

La récente escalade qui a porté aux Etats-Unis les taux à court terme à des niveaux si élevés s'inscrit dans le contexte de l'instabilité extraordinaire qui a caractérisé l'évolution des taux d'intérêt dans ce pays au cours de l'année 1980. Vous vous souvenez sans doute que les taux américains étaient montés très rapidement à des niveaux presque aussi élevés au printemps dernier, puis étaient retombés aussi vite à des niveaux extrêmement bas au début de l'été. Je me réjouis de constater la détermination dont font preuve les autorités américaines dans leur lutte contre l'inflation, mais des variations d'une telle ampleur des taux d'intérêt aux Etats-Unis, que ce soit lorsque les taux atteignent des niveaux aussi élevés ou aussi bas, posent de très graves problèmes pour la politique monétaire canadienne.

high levels is bound to have a major impact on Canada through increases in interest rates here or through a fall in the foreign exchange value of the Canadian dollar, or some combination of the two. The problem does not originate in Canada and the Bank has no way of dealing with it that will not affect either the level of interest rates or the exchange rate or both. The Bank of Canada could, if it chose, try to resist firmly the upward pressure on Canadian short-term interest rates exerted by steeply rising interest rates abroad and accept the inflationary repercussions on our own economy of a sharp decrease in the foreign exchange value of the Canadian dollar as investors responded to the widening gap between interest rates in this country and the rates obtainable south of the border. On the other hand the Bank of Canada could, if it chose, firmly resist any downward pressure on the Canadian dollar by ensuring that short-term interest rates in this country rose as fast and as far in relation to rates abroad as might prove necessary for the purpose. In fact the Bank of Canada has chosen a course of policy which lies between these two extremes. Canadian short-term interest rates have risen considerably, though not nearly as fast or as far as comparable rates in the United States. Back in July short-term rates were roughly 2 percentage points *higher* in Canada than in the United States; currently they are 3 to 4 percentage points *lower* in Canada than across the border. So much for the allegation that it is Bank of Canada policy to force Canadian interest rates to move in lock-step with U.S. interest rates. Over the same period the foreign exchange value of the Canadian dollar has declined from around 87½ cents U.S. to as low as 82½ cents yesterday morning. So much for the allegation that Bank of Canada policy is to keep the Canadian dollar at some predetermined level.

The reason why there is a very real limit to how far the Bank of Canada can prudently go in present circumstances in insulating the Canadian interest rate structure from steeply rising interest rates abroad and accepting the exchange rate consequences of such a policy is the danger of making our already severe inflation problem considerably worse. It would not be safe to assume that the consequent decline in our dollar, or the high U.S. interest rates that precipitated it, would be quickly reversed. We could expect the domestic prices we have to pay for our imports and for the export-related commodities we consume here in Canada to rise before long by a substantial proportion of the percentage decline in the foreign exchange value of the Canadian dollar. In

Dans la conjoncture actuelle, la montée en flèche des taux d'intérêt à court terme à des niveaux si élevés ne manquera pas d'exercer une influence considérable sur l'économie canadienne, en entraînant ou un relèvement des taux d'intérêt dans notre pays ou une chute du cours du dollar canadien ou encore une combinaison des deux. Le problème n'a pas ses causes au Canada, et la Banque ne peut en aucune façon l'attaquer sans influencer les taux d'intérêt, le taux de change ou les deux. La Banque du Canada pourrait, si elle en décidait ainsi, tenter d'opposer une ferme résistance aux pressions à la hausse exercées sur les taux d'intérêt à court terme canadiens par la flambée des taux d'intérêt étrangers et accepter les répercussions inflationnistes qu'une forte baisse du cours du dollar canadien aurait sur notre économie au moment où les investisseurs réagiraient à l'élargissement des écarts entre les taux d'intérêt canadiens et les taux pratiqués chez nos voisins du sud. Par contre, la Banque pourrait, si elle en décidait ainsi, s'opposer fermement à toute pression à la baisse exercée sur le dollar canadien, et ce, en veillant à ce que les taux d'intérêt à court terme augmentent au pays, par rapport aux taux pratiqués à l'étranger, aussi vite et autant que la situation l'exigerait. En fait, la Banque du Canada a choisi de mettre en oeuvre une politique qui se situe entre ces deux extrêmes. Les taux d'intérêt à court terme canadiens ont enregistré une hausse considérable, qui a été cependant moins rapide et moins forte que celle des taux américains comparables. En juillet dernier, les taux à court terme au Canada étaient de 2 points de pourcentage environ *plus élevés* que les taux correspondants aux Etats-Unis; actuellement ils sont de 3 à 4 points de pourcentage *moins élevés*. Faut-il encore d'autres preuves à ceux qui prétendent que la politique de la Banque du Canada vise à aligner rigoureusement les taux d'intérêt canadiens sur les taux américains? Pendant la même période, le cours du dollar canadien exprimé en devise américaine est tombé de 87,5 cents environ à seulement 82,5 cents hier matin. Faut-il encore d'autres preuves à ceux qui prétendent que la Banque du Canada cherche à maintenir le cours du dollar canadien à un niveau fixé d'avance?

Dans la conjoncture actuelle, il y a des risques énormes d'aggraver de façon substantielle le problème déjà brûlant de l'inflation, et ceci impose des limites considérables, d'une part, à ce que la Banque peut faire pour mettre les taux d'intérêt canadiens à l'abri des répercussions de la montée en flèche des taux d'intérêt à l'étranger et, d'autre part, à ce qu'elle peut accepter comme conséquence sur le taux de change, tout en respectant les normes de la prudence. Il serait dangereux de présumer que la baisse du cours du dollar canadien qui s'ensuivrait ou la hausse des taux d'intérêt américains à l'origine de cette baisse pourrait être rapidement inversée. Il faudrait alors s'attendre à ce que le prix des produits que nous consommons au pays – qu'il s'agisse des importations ou des produits d'exportation – s'élève rapidement et dans une proportion très proche du taux de la baisse du cours du dollar canadien. Compte tenu de la conjoncture canadienne actuelle, où les craintes et les anticipations au sujet d'une

Canada's current environment of highly charged fears and expectations of worsening inflation, a substantial jump in prices that raised our present double-digit inflation rate even higher would be likely to trigger a further escalation of wage increases. Thus whatever competitive advantage our export and import-competing industries might gain from further depreciation of the Canadian dollar could quickly be eroded by a further escalation of their on-going labour costs. The risk of such an outcome may be somewhat lower now than it was a year ago when most of these industries were pressing against the limits of their productive capacity, but it is still very real. The end result, in all probability, would be to compound our inflation problem with little or no lasting benefit to our near-term growth prospects.

I believe that the course of action followed by the Bank of Canada in response to the recent upsurge of U.S. interest rates has been both moderate and responsible in all the circumstances. The day is long past for running serious inflationary risks in our economic policies here in Canada. If the only responsible options left to us are ones that are both unpleasant and unpopular, we had better face up to that fact.

This brings me to the second part of my introductory comments. For several years now the basic objective of Canadian monetary policy has been to moderate gradually over time the pace of monetary expansion. This policy approach is based on a conviction that whatever else needs to be done to reverse the drift into ever-deepening inflation, no strategy for doing so will succeed unless it is supported on a continuing basis by firm control over the process of monetary expansion.

How has this policy approach worked out in practice? The trend rate of increase of the money supply and of total spending has indeed been moderating, although at times the pace of progress in this direction has been less steady and more gradual than intended. Over the past one and a half years money supply growth has been in a range of 5 to 9 per cent (annual rates), well below the rates of increase seen earlier in the 1970s which at times reached 15 per cent a year. Total spending in the economy, that is, the dollar value of gross national expenditure, has risen by about 9 per cent over the past four quarters, a rate of growth well below that of the previous four quarters and much below the rates of up to 20 per cent a year seen earlier in the decade. To date our inflation rate, however, has not moderated correspondingly. After falling back for a time a bit below the double-digit rates reached a few years ago, as measured by the Consumer Price Index, it has since turned

aggravation de l'inflation sont des plus vives, une importante majoration des prix qui porterait notre taux actuel d'inflation de plus de 10% à des niveaux encore plus élevés entraînerait une nouvelle accélération de la hausse des salaires. Quels que soient donc les avantages que les industries canadiennes d'exportation et celles qui concurrencent les importations pourraient tirer d'une nouvelle dépréciation du dollar canadien, ils risqueraient fort d'être rapidement effacés par une nouvelle poussée des coûts en main-d'oeuvre. Le danger qu'une telle situation se produise n'est peut-être pas aussi grand maintenant qu'il y a un an puisque à cette époque-là la plupart de ces industries fonctionnaient presque à la limite de leur capacité de production, mais ce danger n'en demeure pas moins très réel. Selon toute probabilité, cette situation finirait par aggraver l'inflation, sans améliorer de façon véritable, ni de façon durable, nos perspectives de croissance dans le proche avenir.

J'estime que la position adoptée par la Banque du Canada face à la récente flambée des taux d'intérêt aux Etats-Unis a été en définitive modérée et inspirée du sens des responsabilités. Il est évident que le Canada ne peut plus se permettre de suivre des politiques économiques qui risquent grandement d'aggraver l'inflation. Même si les seuls choix raisonnables qui s'offrent à nous sont pénibles et peu populaires, nous ne pouvons rien faire d'autre que de les accepter.

J'aborderai maintenant le second volet de mes remarques. Depuis plusieurs années maintenant, la politique monétaire canadienne vise fondamentalement à modérer graduellement le rythme de croissance de la masse monétaire. Cette approche s'appuie sur la conviction que, peu importent les autres mesures qu'il faut prendre pour freiner une inflation qui a tendance à s'accélérer, aucune stratégie ne peut réussir si elle ne bénéficie du soutien constant d'un contrôle ferme de l'expansion monétaire.

Quels résultats tangibles cette politique a-t-elle permis d'obtenir? D'abord, le taux tendanciel de croissance de la masse monétaire et celui de la dépense globale ont effectivement fléchi, bien qu'à certains moments les progrès réalisés à ce chapitre aient été moins réguliers et plus lents que prévu. Au cours des quelque dix-huit derniers mois, la croissance de la masse monétaire s'est maintenue entre 5 et 9% l'an, soit nettement au-dessous des taux enregistrés à certaines périodes pendant la dernière décennie; on se rappellera qu'ils avaient grimpé parfois jusqu'à 15% l'an. La dépense globale (c'est-à-dire, la dépense nationale brute en dollars courants) s'est élevée d'environ 9% au cours des quatre derniers trimestres, soit un taux beaucoup moins élevé qu'au cours des quatre trimestres précédents et nettement inférieur aux 20% déjà enregistrés dans les années soixante-dix. Jusqu'à maintenant toutefois, le taux d'inflation n'a pas diminué à un rythme comparable. Après une baisse temporaire qui a ramené le taux d'inflation, mesuré par l'indice des prix à la consommation, un peu au-dessous des taux de plus de 10% observés il y a quelques années, il a grimpé depuis et a dépassé les 10% au cours des douze derniers mois.

upwards again and over the past twelve months has been in excess of 10 per cent.

The fact that our inflation rate is still as high as it is in spite of the moderating trend of money supply growth and total spending in the Canadian economy is interpreted in some quarters as evidence that the monetary policy approach we have been following is not working. I believe this view to be mistaken. It seems to me that what has happened is that the mild and gradual downward pressure on prices stemming from our efforts to moderate monetary growth and spending has been exceeded for the time being by the strength of upward pressures on costs and prices from a number of other sources. Although a temporary reverse of this kind can happen, and seems to have happened, I am confident that firm persistence with the monetary policy we are pursuing will help to offset the impact of these particular pressures on the over-all price level, and will lead in time to a renewed decline in our over-all inflation rate.

Some of the sources of recent strong upward pressure on the price level that I have referred to are not difficult to identify. Over the past year or two much higher rates of price inflation in the United States and abroad, taken in conjunction with the recurrent weakness of the Canadian dollar, have resulted in rates of increase in the prices we pay for a wide range of export-related commodities and imports (other than subsidized oil imports) well in excess of those for most other goods and services. The special problems of world energy and food supply and prices in relation to the trend of prices in Canada are well known; they have also worsened considerably over the past year with no early relief in sight. The fact that the output capacity of the Canadian economy, like that of most other industrial countries, has not been growing nearly as fast as it used to because of the slowdown in productivity helps to explain why many of our industries began to press against the limits of their productive capacity in 1979 and to generate larger and persisting price and wage increases. These particular sources of upward pressure on the price level have been reinforced by fears and expectations that inflation is out of control and bound to get worse – fears and expectations that feed directly into wage and price-setting behaviour and that in the short run tend to become self-fulfilling. These are some of the powerful forces working against the anti-inflationary influence of gradual monetary restraint.

Que notre taux d'inflation demeure aussi élevé malgré le ralentissement de la croissance de la masse monétaire et de la dépense globale au Canada est considéré dans certains milieux comme une preuve que la politique monétaire que nous poursuivons n'est pas efficace. Je crois qu'une telle opinion est erronée. Ce qui s'est produit, à mon avis, c'est que la pression légère et graduelle qui entraînerait les prix à la baisse, par suite de nos efforts en vue de modérer la croissance de la masse monétaire et de la dépense, est contrecarrée pour l'instant par l'ampleur des pressions à la hausse que certains autres facteurs exercent sur les coûts et les prix. Même si un contretemps passager de ce genre peut se produire, et semble s'être produit, je suis persuadé que, si nous faisons preuve de persévérance dans la mise en oeuvre de notre politique monétaire actuelle, nous contribuerons à contrebalancer l'impact de ces pressions sur le niveau général des prix et qu'avec le temps le taux d'inflation baissera de nouveau.

Certaines causes de la récente pression à la hausse qui s'exerce de façon marquée sur le niveau des prix ne sont pas difficiles à identifier. Depuis un an ou deux, les fortes accélérations de prix enregistrées aux Etats-Unis et ailleurs ainsi que la faiblesse renouvelée du dollar canadien ont entraîné, au niveau des prix de toute une gamme d'importations et de produits d'exportation qui sont vendus au Canada (pétrole subventionné exclu), des augmentations qui ont dépassé de loin celles de la plupart des autres biens et services. Les problèmes particuliers que posent dans le monde les prix et l'approvisionnement tant en énergie qu'en produits alimentaires par rapport à la tendance des prix au Canada sont bien connus; ils se sont même aggravés considérablement au cours de la dernière année et ils ne semblent pas devoir s'atténuer rapidement. Le fait que la capacité de production de l'économie canadienne, comme celle de la plupart des autres pays industriels, n'ait pas augmenté aussi rapidement que d'habitude en raison du ralentissement de la productivité nous aide à comprendre pourquoi plusieurs de nos industries en sont arrivées en 1979 à fonctionner à la limite de leur capacité de production, ce qui a engendré des augmentations à la fois importantes et soutenues des prix et des salaires. A ces causes de pressions à la hausse sur les prix se sont ajoutées les craintes que l'inflation échappe désormais à tout contrôle et les anticipations d'une aggravation inévitable de la situation; ces craintes et ces anticipations se répercutent directement sur le comportement des salaires et des prix et à court terme tendent à se nourrir d'elles-mêmes. Voilà quelques-unes des grandes forces qui s'opposent aux effets anti-inflationnistes d'une politique monétaire restrictive et gradualiste.

Quelles conclusions faut-il tirer de l'expérience que nous avons vécue ces dernières années sur le plan de la politique monétaire? La première, je crois, c'est que les progrès que nous avons réalisés dans la lutte contre l'inflation auraient peut-être été plus substantiels, en dépit des pressions à la hausse dont les prix étaient l'objet, si la

What moral should be drawn from the experience we have had with monetary policy over recent years? First, I believe that we could have made more progress against inflation, in spite of these upward pressures on the price level, if the monetary policy followed had been less gradual – if the pace of monetary expansion had been brought down more promptly and steadily and if, to this end, interest rates had been allowed to rise faster and further at an earlier stage. An important corollary to this conclusion is that an easier monetary policy than the one actually followed would have resulted in a still higher rate of inflation than we are now experiencing. Another conclusion that might be drawn with the benefit of hindsight is that it would have been useful to reinforce the monetary policy that was actually in place with stronger anti-inflationary action in other areas of public policy to the extent that this was feasible. We must recognize that if inflation is to be brought under control demand management policies, including monetary policy, must be pressed to the point where markets for goods and services are not buoyant enough to allow prices to be raised rapidly even though this may mean, at least for a time, more slack in the economy than we would like to see.

The problem of reducing the rate of inflation in Canada has turned out to be more difficult than I had hoped five years ago that it would be, and in that sense I am disappointed. But insofar as monetary policy is concerned, Canadian experience underlines the necessity of continuing firm restraint, and that is the policy that the Bank of Canada intends to follow. We welcome all the help that we can get in the struggle against inflation. The most effective form of help is for all other groups in the community, including governments, to conduct their own affairs in ways that help to reduce cost and price inflation.

politique monétaire avait été moins graduelle, autrement dit si le ralentissement du rythme d'expansion monétaire avait été plus marqué et plus constant et si, pour ce faire, nous avions laissé les taux d'intérêt augmenter plus tôt, plus vite et davantage. Un corollaire important de cette première conclusion est qu'une politique monétaire plus expansionniste aurait engendré un taux d'inflation encore plus élevé que celui que nous connaissons actuellement. Avec le recul, une autre conclusion qui se dégage est qu'il y aurait eu lieu de soutenir davantage la politique monétaire mise en oeuvre, et ce, en instaurant dans la mesure du possible des politiques anti-inflationnistes plus rigoureuses dans d'autres secteurs qui relèvent de la compétence des pouvoirs publics. Nous devons admettre que si nous voulons maîtriser l'inflation, les politiques de gestion de la demande, dont la politique monétaire, doivent être appliquées de façon à empêcher que les marchés de biens et de services ne puissent permettre aux prix d'augmenter rapidement, même si cela risque d'engendrer, du moins pendant un certain temps, un ralentissement plus accentué de l'activité économique que nous ne le souhaiterions.

Il s'est avéré plus difficile de ralentir le rythme de l'inflation au Canada que je ne l'avais pensé il y a cinq ans, et cette constatation me déçoit. Mais en ce qui concerne la politique monétaire, l'expérience vécue au Canada souligne la nécessité d'une politique restrictive ferme et continue, et c'est précisément la voie qu'entend suivre la Banque du Canada. Toute initiative qui pourra nous aider à mener à bien notre combat sera la bienvenue. La contribution la plus précieuse que tous les autres groupes de la collectivité, y compris les gouvernements, pourraient nous apporter serait pour ceux-ci de gérer leurs propres affaires d'une façon qui aiderait à réduire la hausse des coûts et des prix.

Memorandum on monetary policy

Note sur la politique monétaire

This memorandum, which provides a summary of the way in which the Bank of Canada conducts monetary policy, was prepared in response to a request from the Treasury and Civil Service Committee of the United Kingdom House of Commons. In the course of its inquiry into monetary policy that Committee made requests of a number of central banks to provide it with information regarding the conduct of monetary policy in their respective countries.

The preamble to the Bank of Canada Act defines the objectives of monetary policy in Canada. The role of the Bank of Canada is “to regulate credit and currency in the best interests of the economic life of the nation, to control and protect the external value of the national monetary unit and to mitigate by its influence fluctuations in the general level of production, trade, prices and employment, so far as may be possible within the scope of monetary action, and generally to promote the economic and financial welfare of the Dominion”.

The Act also confers on the Bank of Canada various technical powers of the kind generally exercised by central banks in the performance of their monetary control function. The Bank of Canada’s note and deposit liabilities serve as the ultimate form of cash in the Canadian monetary system. This circumstance gives rise to a demand on the part of the chartered banks for claims on the Bank of Canada as banking reserves and this demand is reinforced by the fact that the banks are required by law to hold minimum average cash reserves against their outstanding deposit liabilities. By varying the amount of reserves in the system the Bank of Canada can affect the desire of the banks to bid for assets or deposits. Thus, for example, by reducing the supply of cash reserves relative to the quantity needed by the system to meet the legal requirement, the Bank of Canada can quickly force at least some of the banks into a position of having to sell off liquid assets or to bid more aggressively for blocks of short-term deposit funds. These portfolio responses by banks will put pressure on the level of short-term interest rates in the domestic money market generally with indirect effects in the same direction spilling over into other areas of Canada’s interest rate structure.

La présente note, qui constitue un bref exposé de la façon dont la Banque du Canada met en oeuvre la politique monétaire, a été préparée en réponse à une demande de renseignements présentée par le Treasury and Civil Service Committee de la Chambre des communes du Royaume-Uni dans le cadre d’une enquête sur la politique monétaire. Ce comité a adressé une demande analogue à plusieurs banques centrales.

Les objectifs de la politique monétaire canadienne sont exposés dans le préambule de la Loi sur la Banque du Canada, où il est stipulé que la Banque du Canada a été créée pour “réglementer le crédit et la monnaie dans le meilleur intérêt de la vie économique de la nation, pour contrôler et protéger la valeur extérieure de l’unité monétaire nationale et pour mitiger, par son influence, les fluctuations du niveau général de la production, du commerce, des prix et de l’emploi de la main-d’œuvre, autant que possible dans le cadre de l’action monétaire, et généralement pour favoriser la prospérité économique et financière du Dominion”.

La Loi confère aussi à la Banque du Canada divers pouvoirs techniques comparables à ceux dont disposent généralement les banques centrales pour exercer les fonctions qui leur incombent dans le domaine du contrôle monétaire. Les billets émis par la Banque du Canada et le passif-dépôts de cette institution constituent la forme d’encaisse par excellence du système monétaire canadien. C’est ce qui explique, au niveau des banques à charte, la demande de créances sur la Banque du Canada aux fins d’alimentation de leurs réserves. Cette demande des banques à charte est renforcée par le fait que ces dernières sont tenues par la loi de conserver un montant minimum de réserves-encaisse correspondant à un certain pourcentage de leur passif-dépôts. En modifiant le montant des réserves-encaisse dont dispose le système bancaire, la Banque du Canada peut influencer les initiatives que prennent les banques pour accroître leurs avoirs ou leurs dépôts. Par exemple, en réduisant le montant de réserves-encaisse mises à la disposition des banques comparativement à la quantité dont elles ont besoin pour se conformer aux exigences légales, la Banque du Canada peut forcer rapidement au moins quelques banques à vendre des avoirs liquides ou à concurrencer plus activement les autres pour attirer de gros dépôts à court terme. Les modifications du portefeuille des banques qui en résultent exercent des pressions sur le niveau des taux d’intérêt à court terme pratiqués sur le marché monétaire intérieur en général et ont, indirectement, des répercussions dans le même sens sur d’autres secteurs de la structure des taux d’intérêt au Canada.

The Bank of Canada has always tried to use this influence on interest rates to affect the rate of growth of total spending in the economy in a manner that would contribute to the achievement of the country's economic objectives. Until a few years ago the pursuit of these objectives typically involved actions to smooth cyclical fluctuations in economic activity. Judgements about the appropriate direction and magnitude of the adjustments in short-term interest rates needed for this purpose were based on views about the near-term outlook as well as on a careful monitoring of a number of current economic and financial indicators. The Bank has always shown some interest in movements in the money supply variously defined but until relatively recently it did not have a good basis for obtaining much useful guidance for current policy from these movements.

Making judgements about interest rates on this basis became increasingly difficult during the early 1970s when rising rates of inflation and the development of inflationary expectations made the effects on spending of increases in nominal interest rates much more uncertain. Although interest rates rose quite sharply during this period, inflation pressures continued and there was increasing uneasiness in the Bank about the way policy was working. A considerable amount of research in the Bank at this time was devoted to an analysis of the relationships between monetary aggregates, national expenditure and interest rates to see if a monetary aggregate could be used in a systematic way as a guide for monetary policy.

To be useful in setting interim targets for monetary policy a monetary aggregate should satisfy two principal requirements. First, there should be a sufficiently well established link between the growth in demand by the general public for the money balances which make up the aggregate and the growth in total spending in the economy to permit the central bank to decide with reasonable confidence what growth path for the aggregate is consistent with a particular growth path for total spending. The second requirement is that the growth of the monetary aggregate should be sufficiently sensitive to the actions of the central bank so that monetary targets can be achieved over a reasonable period of time without generating unacceptable instability and uncertainty in financial and foreign exchange markets. Our research indicated that M_1 , a monetary aggregate comprising currency and demand deposits held by the general public, met these criteria reasonably well. Movements in M_1

La Banque du Canada s'est toujours efforcée d'utiliser cette manière d'influencer les taux d'intérêt pour agir sur le taux de croissance de la dépense globale d'une façon qui contribue à la réalisation des objectifs économiques du pays. Jusqu'à ces dernières années, la poursuite de ces objectifs donnait habituellement lieu à des mesures visant à atténuer les fluctuations cycliques de l'activité économique. Les opinions sur le sens dans lequel devaient se faire les ajustements nécessaires des taux d'intérêt à court terme et sur l'ampleur de ces ajustements reposaient sur les perspectives à court terme et sur l'analyse approfondie d'un certain nombre d'indicateurs de l'évolution économique et financière du moment. La Banque a toujours consacré une certaine attention aux mouvements des divers agrégats monétaires, mais ce n'est que depuis peu qu'elle est en mesure de tirer de ces mouvements des renseignements utiles à la mise en œuvre de sa politique.

Au début des années soixante-dix, à un moment où l'accélération de l'inflation et l'apparition des anticipations inflationnistes rendaient beaucoup plus incertaine l'incidence des hausses des taux d'intérêt nominaux sur la dépense, il est devenu de plus en plus difficile de porter des jugements sur les taux d'intérêt en suivant cette méthode. Bien que les taux d'intérêt eussent augmenté de façon très sensible au cours de cette période, les pressions inflationnistes se sont poursuivies et, à la Banque, on a de plus en plus mis en doute la manière dont la politique monétaire fonctionnait. La Banque a effectué à cette époque une quantité considérable de recherches sur les relations existant entre les agrégats monétaires, la dépense nationale et les taux d'intérêt, ce dans le but de déterminer s'il était possible de se servir systématiquement d'un agrégat monétaire comme guide dans la mise en œuvre de la politique monétaire.

Pour être utile dans la formulation des objectifs intermédiaires poursuivis par la politique monétaire, un agrégat monétaire doit satisfaire à deux conditions principales. D'abord, il doit exister, entre la croissance de la demande par le public des formes de monnaie qui constituent l'agrégat en question et la croissance de la dépense globale dans l'économie, un lien suffisamment bien établi pour permettre à la banque centrale de déterminer avec une marge de confiance raisonnable quel profil de croissance de l'agrégat est compatible avec un profil donné de croissance de la dépense globale. Ensuite, la croissance de l'agrégat monétaire doit être assez sensible aux mesures de la banque centrale pour que celle-ci puisse atteindre ses objectifs monétaires dans un laps de temps raisonnable sans engendrer un climat d'instabilité ou d'incertitude sur les marchés financiers et les marchés de change. Nos recherches ont révélé que M_1 , l'agrégat monétaire qui comprend la monnaie hors banques et les dépôts à vue du public, satisfait raisonnablement bien à ces exigences. Les fluctuations de M_1 dépendent principalement des variations du revenu national et de celles des taux d'intérêt à court terme. Comme les composantes de M_1 ne produisent pas d'intérêt, cet

are a function mainly of changes in national income and in short-term interest rates. Since interest is not paid on holdings of M_1 this aggregate is quite sensitive to changes in short-term interest rates and is therefore susceptible to central bank control.

Following on this analysis the Bank of Canada began its present practice of setting interim targets for money growth defined in terms of M_1 . Over the past five years these targets have been gradually reduced from an initial range of 10 to 15 per cent growth to the present range of 5 to 9 per cent growth. The Bank has used its ability to influence short-term interest rates to keep the trend of monetary growth generally within the target range. The levels of interest rates and the effect of any changes in the margins between domestic and foreign rates on the exchange rate which flow from this policy approach are its cutting edge in exerting an influence on spending decisions and thus on the trend of expenditure in the economy.

Looking back over the period during which targets for M_1 have been set, it is the Bank's view that monetary policy has undoubtedly been improved by their use. Nonetheless, there have been problems from time to time with the use of M_1 as a guide for the conduct of monetary policy which should be noted. There are random short-term fluctuations in the growth of M_1 for which no explanations are found even after the event. While these are rarely so large or so long lasting as to present a problem for policy, occasionally unexplained movements of this kind can take longer to reverse themselves, causing M_1 to diverge from its underlying trend for some months. For this reason the targets for M_1 set by the Bank of Canada have been expressed as a range rather than a single growth rate. There is no great significance to the movements of M_1 over the course of a few weeks or even a few months; it is the trend over considerably longer periods which is of primary importance.

M_1 has also been subject to the effects of a number of institutional changes resulting from innovations in banking practices. The nature of the various measures of the money supply is shaped by the practices of financial institutions. As long as any changes in these practices are relatively minor they give rise to no particular problem in interpreting money supply series. Major changes in banking practices can however cause a problem because it is rarely possible to get a direct measure of their effects on the money supply statistics and so it is difficult to know with any precision what allowance should be made for these effects in

agrégat est assez sensible aux variations des taux d'intérêt à court terme et par conséquent au contrôle de la banque centrale.

C'est en s'inspirant des conclusions de ces recherches que la Banque du Canada a adopté la pratique actuelle de fixer des objectifs intermédiaires en fonction de M_1 . Au cours des cinq dernières années, la fourchette-cible, qui s'étendait au début de 10 à 15%, a été graduellement abaissée et elle s'établit actuellement entre 5 et 9%. En exerçant le pouvoir qu'elle a d'influencer les taux d'intérêt à court terme, la Banque a maintenu généralement le taux tendanciel d'expansion monétaire à l'intérieur de la fourchette visée. Le niveau des taux d'intérêt et l'incidence qu'a sur le taux de change toute modification des marges entre les taux canadiens et étrangers qui découle de cette approche sont les facteurs déterminants qu'utilise la Banque pour influencer les décisions des agents économiques en matière de dépense, et par conséquent la tendance de la dépense globale.

Considérant la période durant laquelle elle a poursuivi des objectifs définis en fonction de M_1 , la Banque est d'avis que cette approche a sans aucun doute permis d'améliorer la politique monétaire. Néanmoins, l'utilisation de M_1 comme guide dans la mise en œuvre de la politique monétaire a suscité de temps à autre certains problèmes qu'il faut mentionner. Le taux de croissance de M_1 enregistre parfois des variations aléatoires de courte durée qu'on ne parvient pas à expliquer même a posteriori. Bien que ces variations soient rarement d'une ampleur ou d'une durée telles qu'elles constituent un problème pour la politique monétaire, elles peuvent à l'occasion tarder à se corriger d'elles-mêmes, ce qui amène M_1 à s'écarter de sa tendance fondamentale. C'est pour cette raison que la Banque du Canada a décidé de viser une fourchette plutôt qu'un taux unique de croissance de M_1 . Les variations de M_1 sur des périodes de quelques semaines ou même de quelques mois n'ont pas une grande signification; c'est la tendance de cet agrégat sur des périodes beaucoup plus longues qui revêt une importance capitale.

M_1 a aussi subi les effets d'un certain nombre de changements d'ordre institutionnel qui ont découlé des innovations apportées aux pratiques bancaires. La nature des différents agrégats monétaires est déterminée par les usages des institutions financières. Tant que les modifications apportées à ces usages sont relativement mineures, elles ne posent aucun problème particulier d'interprétation des séries relatives à la masse monétaire. Toutefois, lorsque ces modifications sont significatives, elles peuvent occasionner certaines difficultés, car il est rarement possible de mesurer directement leurs effets sur les statistiques de la masse monétaire et il est ainsi difficile de savoir avec un tant soit peu de précision comment tenir compte de ces effets lorsque l'on interprète le comportement de M_1 et que l'on ajuste de temps en temps le taux visé d'expansion monétaire. A cet égard, certaines innovations ont grandement mar-

interpreting the behaviour of M_1 and adjusting the target range from time to time. There have been innovations in Canadian banking practices which have been important in this regard. The resulting shifts between M_1 balances and other financial instruments reduce the confidence one can have in the stability of the relationship between M_1 , national income and interest rates, and mean that one cannot put uncritical reliance on this monetary aggregate as a guide to monetary policy.

The analysis of these problems with the use of M_1 has not however indicated that monetary policy could be improved if the Bank of Canada framed its monetary targets in terms of some broader aggregate. There are even more difficult problems in extracting information useful to the conduct of monetary policy in Canada from the broader aggregates. This is because the broad aggregates are affected in a major way by factors other than the growth of national income and changes in interest rates. In the Canadian financial system shifts in the shares of business flowing through banks, other financial institutions and securities markets are constantly occurring and frequently give rise to major movements in the broader aggregates that are without significance for monetary policy. Another limitation to the use of broad monetary aggregates as policy targets in Canada is that these aggregates are relatively unresponsive in the short run to interest rate movements and, as a result, they cannot be readily controlled by central bank actions.

Given the relative looseness of the relationship between monetary aggregates and the growth of spending in the economy, apart from the effects of interest rate changes, the Bank does not consider that the use of monetary growth targets can be approached in a mechanical way and it continues to analyze a broad range of economic and financial information for policy purposes. Such analysis is clearly necessary both in setting and changing money supply target ranges and in assessing the timing, magnitude and economic impact of short-term interest rate adjustments that the Bank may consider from time to time. Moreover, within the general framework of monetary targets, the Bank continues to have regard in its operations to any near-term developments on the economic or financial scene that may pose a direct threat to Canada's cost and price performance. Thus, following the depreciation of the external value of the Canadian dollar in 1977 and 1978, the Bank has been paying particular attention to interest rate relationships between Canada and abroad to ensure that they would not contribute to an

qué les usages bancaires canadiens. Il en est résulté, entre les composantes de M_1 et les autres formes d'avoirs financiers, des déplacements qui ont entamé la confiance que l'on peut avoir dans la stabilité de la relation entre M_1 , le revenu national et les taux d'intérêt et qui signifient que l'on ne peut utiliser aveuglément cet agrégat monétaire comme guide de la politique monétaire.

Cependant, l'analyse des problèmes que pose l'utilisation de M_1 ne permettait pas de conclure que la politique monétaire pourrait être améliorée si les objectifs d'expansion monétaire de la Banque du Canada étaient formulés en fonction d'un agrégat comportant plus d'éléments que M_1 . Il est encore plus difficile de tirer des agrégats au sens large des renseignements qui soient utiles à la mise en œuvre de la politique monétaire, parce que ces agrégats sont fortement influencés par des facteurs autres que la croissance du revenu national et les variations des taux d'intérêt. Dans le système financier canadien, il se produit continuellement des modifications de la part du marché que détiennent respectivement les banques, les institutions parabancaires et le marché obligataire, ce qui fait souvent subir aux agrégats au sens large des fluctuations importantes, mais sans signification pour la politique monétaire. Le fait qu'à court terme ces agrégats ne réagissent généralement pas aux fluctuations des taux d'intérêt et qu'en conséquence ils ne peuvent être contrôlés facilement par la banque centrale constitue une autre raison limitant les possibilités d'utilisation de ces agrégats dans la poursuite d'objectifs monétaires au Canada.

Étant donné que la relation n'est pas très étroite entre les agrégats monétaires et l'accroissement de la dépense – abstraction faite des effets des variations des taux d'intérêt –, la Banque ne pense pas qu'on puisse se servir de façon mécanique des cibles d'expansion monétaire et elle continue d'analyser un large éventail de données économiques et financières. La nécessité de ces analyses est évidente tant en ce qui a trait à l'établissement et à la modification des fourchettes monétaires visées qu'en ce qui concerne les dates auxquelles la Banque peut décider de provoquer des ajustements des taux à court terme, l'ampleur de ces ajustements et leur incidence économique. En outre, à l'intérieur du cadre général de ses objectifs d'expansion monétaire, la Banque continue de s'intéresser, dans ses opérations, à toute évolution à moyen terme sur la scène économique ou financière qui soit susceptible de constituer une menace directe pour la tenue des coûts et des prix au Canada. Ainsi, depuis la dépréciation du dollar canadien en 1977 et en 1978, la Banque prête une attention particulière aux rapports existant entre les taux d'intérêt canadiens et étrangers afin de s'assurer que les écarts entre ces taux ne contribuent pas à accélérer l'inflation par le biais d'une nouvelle baisse considérable du cours du dollar canadien dans une conjoncture où cela n'est pas nécessaire pour assurer la compétitivité de l'économie canadienne sur les marchés internationaux. Même si cet objectif et la fourchette assignée à M_1 semblent présenter

acceleration of inflation through a further substantial decline in the exchange rate for the Canadian dollar in circumstances where such decline was not needed to make the Canadian economy competitive internationally. While inconsistencies may seem to arise temporarily between this objective and the specific target range for M_1 , the Bank sees no fundamental conflict between this concern for the potential inflationary effects of exchange rate depreciation and the pursuit of a trend rate of growth of M_1 which is over time consistent with receding inflation.

par moments certaines contradictions, la Banque ne voit aucun conflit fondamental entre ses préoccupations au sujet des effets inflationnistes possibles d'une dépréciation du dollar canadien et la volonté d'atteindre un taux tendanciel de croissance de M_1 qui soit compatible à la longue avec une diminution du taux d'inflation.

Bilingualism in the Bank of Canada

Le bilinguisme à la Banque du Canada

The Bank of Canada has recently published a second report entitled "Bilingualism in the Bank of Canada". It supplements the earlier report of the same name which was announced in the December 1979 issue of this Review. Copies are available on request from:

Record of press releases

Communiqués reproduits à titre documentaire

Major press statements issued by the Bank of Canada and selected other official releases of related interest are published below.

On trouvera sous cette rubrique certains communiqués importants publiés par la Banque du Canada ou par d'autres organismes officiels.

Bank of Canada 18 December 1980

Following the auction of 91-day treasury bills this afternoon, the Bank of Canada announced that the Bank Rate had increased to 17.36 per cent from 16.14 per cent a week ago.

The Bank said that the background situation remained that described in various Bank statements in recent weeks. The increase in short-term interest rates in Canada this week is a response to the further increase of interest rates in the United States, to further weakness in the foreign exchange value of the Canadian dollar and to further evidence of the distressingly high rate of price inflation in Canada.

Bank of Canada 8 January 1981

Following the auction of 91-day treasury bills this afternoon, the Bank of Canada announced that the Bank Rate had declined to 17.00 per cent from 17.26 per cent a week ago.

The Bank noted that in the last three weeks short-term interest rates in the United States have fallen somewhat but that whether, or to what extent, they will decline further is not clear. Since the run-up in short-term interest rates in the latter part of 1980 was substantially greater in the United States than in Canada it should not be expected that if they continue to decline in the United States they will fall as much in Canada.

Banque du Canada le 18 décembre 1980

Au terme de l'adjudication des bons du Trésor à 91 jours qui a eu lieu cet après-midi, la Banque du Canada a annoncé un relèvement de son taux d'escompte, qui est passé à 17,36%. Ce taux s'était établi à 16,14% la semaine dernière.

La Banque a déclaré que le contexte dans lequel survient ce relèvement du taux d'escompte est similaire à celui qu'elle a décrit dans ses divers communiqués des dernières semaines. La hausse que connaissent les taux d'intérêt à court terme au Canada cette semaine est liée à la montée continue des taux d'intérêt aux Etats-Unis, à la faiblesse persistante du cours du dollar canadien et à la publication de données confirmant l'augmentation alarmante des prix au Canada.

Banque du Canada le 8 janvier 1981

Au terme de l'adjudication des bons du Trésor à 91 jours qui a eu lieu en début d'après-midi, la Banque du Canada a annoncé une diminution de son taux d'escompte, qui est passé à 17%. Il y a une semaine, ce taux s'était établi à 17,26%.

La Banque a fait remarquer que les taux à court terme ont baissé quelque peu aux Etats-Unis au cours des trois dernières semaines, mais qu'il n'est pas possible de prévoir si cette baisse va se poursuivre ni, le cas échéant, quelle en sera l'ampleur. Etant donné que la montée des taux d'intérêt à court terme a été beaucoup plus marquée aux Etats-Unis qu'au Canada au cours de la dernière partie de 1980, il ne faudrait pas s'attendre que les taux canadiens diminuent autant que les taux américains si la baisse se poursuit aux Etats-Unis.

*Because of Good Friday in this week, the tender for treasury bills was moved forward to Wednesday. The Bank Rate for April 2 is based on the average treasury bill rate of that day.

**These Bank Rates apply respectively to 23 December 1980 and 31 December 1980 because the date of the treasury bill tender was changed to accommodate the Christmas and New Year holidays.

*Cette semaine-là, en raison du congé du Vendredi saint, l'adjudication de bons du Trésor a été avancée au mercredi. Le taux d'escompte du 2 avril a été calculé à partir du taux moyen auquel les bons du Trésor ont été adjudgés ce jour-là.

**Ces taux d'escompte ont été fixés respectivement les 23 et 31 décembre 1980, les dates des adjudications de bons du Trésor ayant été modifiées à cause des congés de Noël et du jour de l'An.

Special features of a number of issues are as follows.

- (a) Subject to partial redemption at par for the sinking fund on each interest payment date, commencing with 15 April 1965. The earliest call date is 15 October 1977.
- (b) This item represents the cancellation of securities held by purchase funds.
- (c) The Canadian dollar equivalent of U.S. \$100 million issue; U.S. \$72 million was delivered 11 June 1968, U.S. \$13 million 15 October 1968 and the remainder in January 1969. The earliest call date is June 1978.
- (d) Callable after 15 September 1996.
- (e) On 18 March 1975 the Government of Canada announced that the 3% perpetual bonds will be redeemed at par on 15 September 1996.
- (j) The Canadian dollar equivalent of DM500 million issue; DM 300 million was delivered 5 May 1978, DM 200 million was delivered 9 May 1978. Callable 10 May 1982.
- (k) Callable after 1 October 1984.
- (l) Callable after 1 April 1988.
- (m) Callable after 15 October 1988.
- (n) Callable after 20 March 1985.
- (o) Exchangeable on or before 14 December 1984 into an equal par value of 13 3/4%, 15 March 1990.
- (p) Exchangeable on or before 1 February 1985 into an equal par value of 13%, 1 May 1990.
- (q) Exchangeable on or before 29 June 1984 into an equal par value of 12 1/2%, 1 October 1990.

Les renvois ci-dessous indiquent les particularités de certaines émissions.

- (a) Emprunt sujet à remboursement partiel par le fonds d'amortissement, au pair, aux dates d'échéance des coupons, à partir du 15 avril 1965; ne peut être remboursé intégralement par anticipation avant le 15 octobre 1977.
- (b) Annulation de titres détenus par le fonds de rachat.
- (c) Contrevaleur en dollars canadiens d'une émission de 100 millions de dollars E.-U., dont une tranche de 72 millions a été livrée le 11 juin 1968, une autre de 13 millions le 15 octobre 1968 et le solde de 15 millions en janvier 1969. Ces obligations ne peuvent être remboursées par anticipation avant le 1^{er} juin 1978.
- (d) Remboursables par anticipation après le 15 septembre 1996.
- (e) Le 18 mars 1975, le gouvernement canadien a annoncé que les rentes perpétuelles 3% seront remboursées à leur valeur nominale le 15 septembre 1996.
- (j) Contrevaleur en dollars canadiens de l'émission de 500 millions de deutsche mark, dont une tranche de 300 millions fut livrée le 5 mai 1978 et le solde le 9 mai 1978. Remboursables par anticipation le 10 mai 1982.
- (k) Remboursables par anticipation, après le 1^{er} octobre 1984.
- (l) Remboursables par anticipation, après le 1^{er} avril 1988.
- (m) Remboursables par anticipation, après le 15 octobre 1988.
- (n) Remboursables par anticipation, après le 20 mars 1985.
- (o) Exchangeables, au plus tard le 14 décembre 1984, contre une valeur nominale égale d'obligation 13 3/4% échéant le 15 mars 1990.
- (p) Exchangeables, au plus tard le 1^{er} février 1985, contre une valeur nominale égale d'obligation 13% échéant le 1^{er} mai 1990.
- (q) Exchangeables, au plus tard le 29 juin 1984, contre une valeur nominale égale d'obligation 12 1/2% échéant le 1^{er} octobre 1990.

*Promissory notes of the trust companies were previously included in term deposits while those of the mortgage loan companies were shown as a separate item. Subordinated notes of all companies were included in other liabilities.

*Jusqu'ici, les billets à ordre des sociétés de fiducie étaient compris dans les dépôts à terme tandis que ceux des sociétés de prêt hypothécaire figuraient séparément. Les billets subalternes de toutes les sociétés faisaient partie des autres éléments du passif.

*Promissory notes of both trust and mortgage loan companies were previously included in term deposits; the small amount of subordinate notes for both industries was excluded from total major liabilities.

*Jusqu'ici, les billets à ordre des sociétés de fiducie et des sociétés de prêt hypothécaire étaient compris dans les dépôts à terme; le faible montant des billets subalternes était exclu de l'ensemble des principaux engagements.

Tables published annually or semi-annually

The date of issue of the Bank of Canada Review that contained the most recent appearance of each table is given in brackets.

- A1 Bank of Canada note liabilities (February 1980)
- A2 Chartered banks: Deposit liabilities classified by size (July 1980)
- A3 Chartered banks' general loans: Number of accounts (November 1980) Corrected (December 1980)
- A4 Chartered banks: Revenues and expenses (February 1980)
- A5 Chartered banks: Shareholders' equity and accumulated appropriations for losses (February 1980)
- A6 Bonds outstanding: Government of Canada, provincial, municipal, corporate and other bonds (November 1980)
- A7 Estimated distribution of holdings of provincial, municipal, corporate and other bonds (March 1979)
- A8 Trusteed pension plans (January 1981)
- A9 Life insurance companies: Assets held in Canada (September 1980)
- A10 Canadian assets of sixteen life insurance companies (August 1978)
- A11 Deposits with government savings institutions (February 1980)
- A12 Exchange Fund Account: Assets and liabilities (June 1980)
- A13 Net outstanding forward contracts in U.S. dollars (June 1980)
- A14 Net new issues of corporate securities: Industrial classification (October 1980)
- A15 Canadian balance of international indebtedness (April 1980)
- A16 Monetary aggregates (March 1980)

Tableaux publiés annuellement ou semestriellement

On trouvera ci-dessous la liste de ces tableaux et l'indication, dans chaque cas, de la dernière livraison de la Revue dans laquelle ils ont été publiés.

- A1 Banque du Canada: Passif-billets (Février 1980)
- A2 Banques à charte: Répartition des dépôts selon le montant (Juillet 1980)
- A3 Prêts généraux des banques à charte: Nombre d'emprunteurs (Novembre 1980) Chiffres corrigés (Décembre 1980)
- A4 Banques à charte: Revenus et dépenses (Février 1980)
- A5 Banques à charte: Avoir propre et ensemble des provisions pour pertes (Février 1980)
- A6 Encours des obligations: Gouvernement canadien, provinces, municipalités, sociétés et autres emprunteurs (Novembre 1980)
- A7 Obligations des provinces, municipalités, sociétés et autres emprunteurs: Répartition par catégories de détenteurs (estimations) (Mars 1979)
- A8 Caisses de retraite gérées en fiducie (Janvier 1981)
- A9 Compagnies d'assurance-vie: Avoirs détenus au Canada (Septembre 1980)
- A10 Avoirs canadiens de seize compagnies d'assurance-vie (Août 1978)
- A11 Dépôts dans les caisses d'épargne publiques (Février 1980)
- A12 Fonds des changes: Bilan (Juin 1980)
- A13 Solde net des opérations de change à terme en dollars E.-U. (Juin 1980)
- A14 Emissions nettes des sociétés: Répartition selon la branche d'activité économique (Octobre 1980)
- A15 Balance canadienne de l'endettement envers l'étranger (Avril 1980)
- A16 Agrégats monétaires (Mars 1980)

Notes to the tables

Symbols used in charts and tables

| | |
|---|-------------------|
| A | arithmetic scale |
| L | logarithmic scale |
| E | estimated |
| P | preliminary |
| R | revised |
| N | not available |
| C | corrected |

Owing to the rounding of figures, components may not always add to the totals shown. A horizontal rule in the body of the table indicates either a break in the series or that the earlier figures are available only at a more aggregated level.

Cansim–Databank identification numbers

Many of the time series published in the Review are available from Statistics Canada in machine-readable form, for use on computers, or in print-outs. Each time series of annual, quarterly or monthly data on the Cansim system (Canadian Socio-Economic Information Management) has an identification number. Series maintained by Statistics Canada have a D prefix (e.g. D1432), those maintained by the Bank of Canada have a B prefix (e.g. B318) and those maintained by Canada Mortgage and Housing Corporation have a H prefix (e.g. H48). The identification number is given as a reference at the top of each column of data and refers to the series of monthly or quarterly data in that column. Where both quarterly and monthly data appear in a column, the databank number is followed by a symbol to indicate whether the number refers to quarterly series (*) or to monthly series (†). Current and revised data are entered into Cansim immediately on release.

Weekly series

The tables in the Review do not cover a full year of weekly data. For all Wednesday series, in the event a holiday falls on a Wednesday, data for the preceding business day will be shown. Figures for weekly series for which the Bank of Canada is the source are available on request to the Department of Monetary and Financial Analysis, Bank of Canada, Ottawa K1A 0G9.

Notes to the tables

Beginning with this issue of the Bank of Canada Review the explanatory notes to the tables, which have appeared in each monthly issue, are being printed under a separate cover and sent to all subscribers to the Review. It is the intention to print these only once a year from now on. Consequently users should keep their copy of the notes for reference.

In the event the note to a table requires updating or changing throughout the year, that note will be printed in the regular monthly Review and will be carried in each issue until the next annual printing of the notes.

Subscribers who require additional copies of the notes may obtain these by writing to the Bank of Canada Review, Distribution Section, Bank of Canada, Ottawa, K1A 0G9.

Notes relatives aux tableaux

Abréviations utilisées dans les graphiques et les tableaux

| | |
|---|--------------------------|
| A | Echelle arithmétique |
| L | Ordonnées logarithmiques |
| E | Estimations |
| P | Chiffres provisoires |
| R | Chiffres révisés |
| N | Chiffres non disponibles |
| C | Chiffres corrigés |

Du fait que les chiffres sont arrondis, l'addition des éléments d'un tableau ne correspond pas toujours exactement au total indiqué. Une ligne horizontale dans le corps d'un tableau indique soit qu'il y a une rupture dans une série, soit que les données des périodes antérieures ne sont disponibles que sous forme d'agrégats plus complexes.

Cansim – Numéros de référence des séries de Databank

Nombre des séries chronologiques publiées dans la Revue peuvent être obtenues de Statistique Canada sous une forme directement exploitable par ordinateur ou sous la forme de tableaux produits par ordinateur. Elles font partie intégrante du fichier Cansim¹, dont chaque série chronologique – annuelle, trimestrielle ou mensuelle – est identifiée par un numéro de référence. Les numéros des séries élaborées par Statistique Canada sont précédés de la lettre «D» (par exemple: D1432), ceux des séries de la Banque du Canada, de la lettre «B» (par exemple: B318), et ceux de la Société canadienne d'hypothèques et de logement, de la lettre «H» (par exemple: H48). Dans nos tableaux, le numéro apparaît en tête de la colonne et identifie la série trimestrielle ou la série mensuelle, selon que l'une ou l'autre figure dans la colonne; dans les cas où celle-ci comporte à la fois une série trimestrielle et une série mensuelle, le numéro est suivi d'un signe qui identifie la série trimestrielle (*) ou la série mensuelle (†). Les données nouvelles et les révisions sont incorporées au fichier Cansim dès qu'elles sont publiées.

1. Ce sigle est une abréviation de *Canadian Socio-Economic Information Management System* – Système canadien de traitement des données socio-économiques.

Séries hebdomadaires

Dans les tableaux de la Revue, les séries de données hebdomadaires ne couvrent pas une année entière. Lorsque le mercredi est un jour férié, les statistiques du mercredi sont établies à partir des données du jour ouvrable précédent. On pourra obtenir les données provenant de la Banque du Canada en s'adressant au département des Etudes monétaires et financières, Banque du Canada, Ottawa K1A 0G9.

Notes relatives aux tableaux

A partir de la présente livraison de la Revue de la Banque du Canada, les notes relatives aux tableaux, qui étaient jusqu'ici reproduites tous les mois, sont maintenant imprimées séparément. Un exemplaire est envoyé à tous les abonnés de la Revue. A partir de maintenant ces notes ne seront probablement imprimées qu'une fois par année. Les lecteurs sont donc priés de conserver leur exemplaire pour fins de consultation.

Au cas où la note relative à un tableau devrait être mise à jour ou modifiée au cours de l'année, elle sera imprimée dans le numéro régulier du mois et sera reprise dans toutes les livraisons suivantes jusqu'à la prochaine impression annuelle des notes.

Les abonnés qui désirent recevoir d'autres exemplaires des notes sont priés d'écrire à cet effet au Service de la diffusion, Revue de la Banque du Canada, Banque du Canada, Ottawa K1A 0G9.

A8

Source: Statistics Canada

Data are obtained from the Statistics Canada publication "Trusteed Pension Plans - Financial Statistics 1979" and similar surveys in previous years. These publications contain more detailed information than is shown in the table. A trustee pension fund is defined as an arrangement under which contributions to a pension plan are deposited with a trustee who is responsible for holding and investing funds and paying benefits in accordance with the terms of a trust agreement. In the case of pooled and mutual funds, ownership is shared by several organizations to enable small plans to diversify their investments. Prior to 1965 guaranteed investment certificates were included with cash and bank deposits and short-term investments were included in other assets. Beginning with 1973, the total assets of trustee pension plans shown in this table differ from the figures published by Statistics Canada in that they do not include investment by life insurance companies in segregated or pooled funds. These assets are included in data for the life insurance industry.

• *Government bonds* include guaranteed bonds. • In 1979 *other assets* were made up of \$517 million accrued interest, \$398 million accounts receivable and \$12 million all other assets. • *Other plans* include religious, charitable and health organizations, trade and employee associations and co-operatives.

A8

Source: Statistique Canada

Ces données sont extraites de la publication de Statistique Canada intitulée « Régime de pensions en fiducie - Statistique financière 1979 » et des publications équivalentes des années précédentes. Ces publications contiennent des renseignements plus détaillés que le tableau A8. On désigne sous le nom de caisse de retraite gérée en fiducie tout plan de retraite en vertu duquel les cotisations et contributions sont confiées à des fiduciaires qui se sont engagés à conserver et à investir ces fonds et à verser les prestations, conformément aux dispositions d'un acte de fiducie. Dans le cas de placements dans des fonds en commun et dans des fonds mutuels, on les répartit généralement entre plusieurs organismes, ce qui permet d'assurer une plus grande diversité aux caisses de petites entreprises. Antérieurement à 1965, l'encaisse et les dépôts en banque comprenaient les certificats de placement garantis tandis que les placements à court terme figuraient avec les *autres éléments de l'actif*. À partir de 1973, les données relatives aux avoirs des caisses de retraite gérées en fiducie diffèrent de celles de Statistique Canada, du fait qu'elles ne comprennent pas les placements inscrits par les compagnies d'assurance-vie dans des comptes séparés ou communs. Ces avoirs sont englobés dans les données relatives aux compagnies d'assurance-vie.

• Les *obligations des gouvernements* comprennent les obligations garanties par eux.
 • En 1979, les *autres éléments de l'actif* se répartissaient comme suit: intérêts courus, \$517 millions; comptes à recevoir, \$398 millions; autres actifs, \$12 millions. • Les *autres caisses* comprennent les caisses des organismes ayant pour objet la religion, la charité et la santé, et celles des associations professionnelles, des associations d'employés et des coopératives.

- 3 An econometric model of Canadian-U.S. trade in automotive products, 1965-1971 (Out of print)
William E. Alexander
- 4 A monthly model of the Canadian financial system
Kevin Clinton, Paul Masson
- 5 The equations of RDX2 revised and estimated to 4Q72
- 6 Sectoral analysis of RDX2 estimated to 4Q72
- 7 The comparative ex post forecasting properties of several Canadian quarterly econometric models
W. Paul Jenkins and Lloyd R. Kenward
- 8 Models of inflation: A taxonomy of effects
Charles Freedman
- 9 The role of U.S. interest rates in Canadian interest-rate equations: An exploratory analysis
Charles Freedman, David Longworth and Paul Masson
- 10 Research into the extension of the life of bank notes: Results of 1973, 1975 and 1976 field trials
A. H. Gillieson
- 11 A neo-Keynesian model of nominal wage determination in Canada
Benjamin W. Wurzbürger
- 12 Economic stabilization and the money supply
Pierre Duguay and Paul Jenkins
- 13 An analysis of the major dynamic properties of RDX2
L. de Bever, U. Kohli and T. Maxwell
- 14 An examination of the small-open-economy hypothesis for Canadian exports
Benjamin W. Wurzbürger
- 15 Une analyse du modèle à forme réduite et son application au Canada
Pierre Duguay
- 16 Monetary base and money stock in Canada
Kevin Clinton and Kevin Lynch
- 17 The Canadian newsprint industry: Econometric models of different market structures
Gordon P. Schaefer
- 18 Simulation analysis of a model based on the life-cycle hypothesis
Jean-Pierre Aubry and Diane Fleurent
- 19 The process of wage determination: A survey of some recent work
Daryl L. Merrett
- 20 Some aspects of the Canadian experience with flexible exchange rates in the 1970s
Charles Freedman and David Longworth
- 21 Two Canadian investment outlook surveys: An overview and a review
Brian O'Reilly
- 22 Building a small macro-model for simulation: Some issues
Paul R. Masson, David E. Rose and Jack G. Selody
